

Easy, Quick and Cost-Efficient Product Development

Oil-Expert.net is a further development of OilExpert. It covers and supports the whole product development cycle, especially the development of recipes for fat refineries, margarine factories and the confectionery & chocolade industry. In particulary in working with edible fats and oils, it is possible to move a large part of laboratory work to the computer by calculation, simulation and optimization recipes and parameters.

Benefits:

- Simplification and cost control in product development
- Complete workflow from the first idea to the first delivery
- Powerful search engine
- Audit Trail
- All important data are stored in a server database and is available at any time
- Integrated recipe management with multi-level assemblies
- Integrated specification management incl. production instructions
- Reduction of costs and time regarding laboratory tests and analyses
- Cost optimization getting the recipe with the lowest price
- Rapid response to customer requests and internal product requirements
- Rapid response to questions on possible recipes

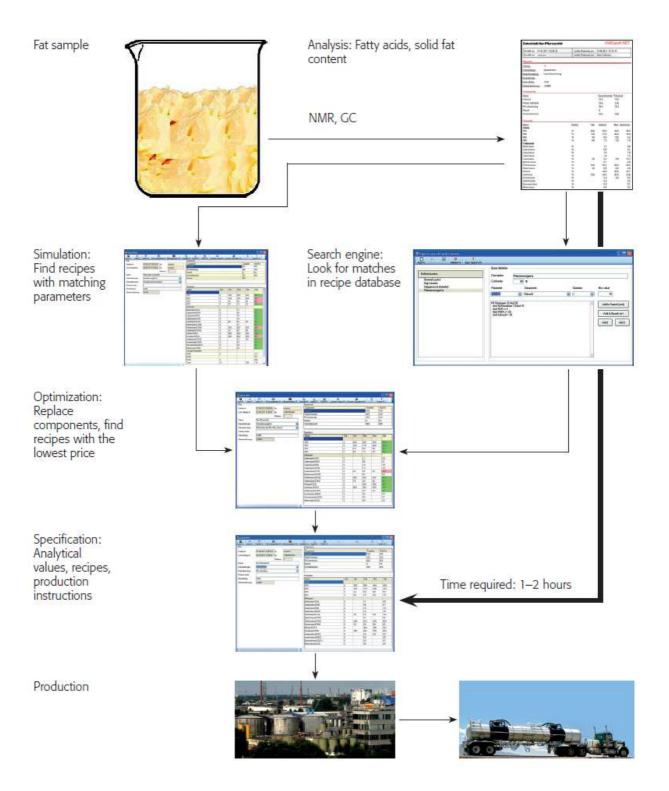

Oil-Expert.net is based on modern algorithms and is easy and intuitive to use.
